

ON THE FRONT OF YOUR BLUEBOOK write: (1) your name, (2) your student ID number, (3) lecture section (4) your instructor's name, and (5) a grading table. You must work all of the problems on the exam. Show ALL of your work in your bluebook and **BOX IN YOUR FINAL ANSWERS**. A correct answer with no relevant work may receive no credit, while an incorrect answer accompanied by some correct work may receive partial credit. Textbooks, classnotes, crib sheets, or calculators are not permitted.

1. (20 points) Let L be the line in \mathbf{R}^3 that consists of all scalar multiples of $\begin{bmatrix} 2 \\ 1 \\ 2 \end{bmatrix}$, and T a transformation from \mathbf{R}^3 to \mathbf{R}^3 such that

$$T(\vec{x}) = (\text{proj}_L \vec{x}) + \vec{x}$$

where $\text{proj}_L \vec{x}$ is the orthogonal projection of \vec{x} onto L .

- a. Find the matrix corresponding to T .

- b. Use question (a) to find $T(\vec{v})$ for $\vec{v} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$.

2. (20 points) Consider the linear system

$$\begin{cases} x + 2y + 3z = a \\ x + 3y + 8z = b \\ x + 2y + 2z = c \end{cases}$$

where a , b , and c are arbitrary constants.

- a. For which value(s) of a , b , and c this system is *inconsistent*?
- b. For which value(s) of a , b , and c does this system have one solution? Find the solution.
- c. For which value(s) of a , b , and c does this system have infinitely many solutions? Find all the solutions.
