Know...

C SUN's College of Engineering and Computer Science outranks most engineering schools in the percentage of women faculty members, 18 percent, who are either tenured or on the tenure track. That's better than nearly 80 percent of the U.S. universities that have more than two dozen faculty members in the field, according to data published by the American Society for Engineering Education.

T he workhorses of major construction—cranes, bulldozers and trucks—are beginning to appear on campus as Cal State Northridge enters one of its busiest building phases since the massive reconstruction projects of the 1990s. Work has begun, or is being planned, for five projects—a student housing complex, science building, parking structure, faculty and staff housing, the new Valley Performing Arts Center and a new student recreation center—on the 356-acre campus.

C al State Northridge has been recognized by the National Consortium for Athletics and Sports, which has more than 200 members, for continuing to support student athletes after they stop competing and encouraging the students to give back to the community. CSUN tied for 23rd place on the consortium's honor roll during the 2006–2007 year.

C alifornia State University, Northridge has been named to the President's Higher Education Community Service Honor Roll with Distinction by the Corporation for National and Community Service. Northridge is one of 12 California State University campuses to receive national honors from the White House and the Corporation, an independent federal agency tasked with fostering an ethic of volunteerism and service in America for work done in 2007.
