Undergraduate Research opportunities for Spring 2017

Many advanced academic programs and companies require or strongly recommend that applicants have some undergraduate research experience under their belt. A convenient way to get some research experience is Biol495, Directed Undergraduate Research. Browse faculty web pages and ask around, to find out if you might be able to join a lab in the Spring.

Dr. Steve Oppenheimer invites students to fill out a Spring 17 495D form in the Biology office, to conduct research with yeast as a model system to identify possible reagents that revert cell clumping, and may thus contribute to fighting thrombocytic events, cancer cell survival and infectivity.

AMGEN Scholars Program

UC Berkeley is pleased to announce the 2017 Amgen Scholars Summer Research Program. The program provides an opportunity to do research with a faculty member and their team, communicate findings through poster and oral presentations, prepare for graduate school and the GRE and network with other faculty. They also provide a stipend, housing, meal allowances and transportation to and from the Berkeley campus.

Program dates are May 29-Aug 4, 2017. Application **deadline is February 1, 2017.**

Click here [to apply and for more information](#).

Don't forget that the **Biology Alumni Association BIOBASH** is **TONIGHT** !
Food, ruffles and a good time. We hope to see you there !
