Improving Student Writing Through Effective Classroom Practices

To succeed in today's information-driven economy, young people need to know how to write and communicate effectively. Writing is important for both academic and workplace success. It is essential to learning and thinking.

The National Writing Project (NWP) works with teachers across the country to improve the teaching of writing in the nation's classrooms. Results from two new research studies, one from the Academy for Educational Development (AED) and the other from Inverness Research Associates (IRA), show how NWP professional development leads to improved student writing achievement.

Most NWP teachers surveyed by IRA in May 2001 stated that the writing project helped them become more up-to-date on the latest research, more familiar with strategies to teach diverse students, and more knowledgeable about helping students reach standards.

NWP teachers learn effective teaching strategies

“A lot of strategies from the writing project are now almost standard in our school.”

– Fourth Grade Writing Project Teacher

The National Writing Project is a professional development network of 175 local sites in 50 states, the District of Columbia, the U.S. Virgin Islands, and Puerto Rico, annually serving about 100,000 kindergarten through university teachers in all disciplines.
Of 58 writing project teacher assignments analyzed by AED, 86% asked students to construct knowledge by analyzing, synthesizing, evaluating, or interpreting information, rather than simply reproducing it. And of 763 pieces of student work produced in response to those assignments, 84% showed evidence of construction of knowledge. Ninety percent of teacher assignments analyzed by AED also asked students to demonstrate an understanding of concepts beyond a superficial awareness.

SAMPLE ASSIGNMENT – GRADE 4

We were working on the story, Charlotte’s Web. Students were asked to put themselves in the shoes of the author and attempt to produce a new final chapter with a clear story line and substantial detail to support characters, setting, problem, and conclusion. Students were asked to use dialogue and quotation marks.

This fourth grade assignment asks students to demonstrate an understanding of concepts by rewriting an ending to Charlotte’s Web. Students must show comprehension of both the story line and character development. (AED, 2001)

The 1998 National Assessment of Educational Progress (NAEP) writing assessment found that students who planned their writing, completed more than one draft, and kept portfolios of their work were more likely to score higher than their peers. NWP professional development fosters these and other related practices in the classroom.

CLASSROOM PRACTICES THAT INCREASE AFTER TEACHERS ATTEND WRITING PROJECT SUMMER INSTITUTES

- Students discuss writing with each other: 79%
- Students plan writing: 68%
- Students answer questions in writing: 66%
- Students produce more than one draft: 61%

The percentages above represent teachers who indicated that they engaged in the practice “more often” after attending a writing project summer institute. (IRA, 2001)
National assessments of writing over the past two decades have repeatedly shown that students spend too little time writing in and out of school to reach high levels of writing achievement.* AED research shows that writing project teachers were far more likely to devote time to writing instruction than fourth grade teachers participating in NAEP’s 1998 national sample.

Third and fourth grade students of writing project teachers studied by AED showed significant improvement in writing achievement over the course of the 2000-2001 school year. In response to timed writing assignments, 89% of third-graders and 81% of fourth-graders reached adequate or strong achievement for effectiveness in persuasive writing on their follow-up assessment in spring 2001.

A total of 83% of third-graders and 73% of fourth-graders demonstrated general or strong control of usage, mechanics, and spelling on their follow-up AED assessment.

Of more than 2,700 writing project teachers surveyed by IRA in 2000, 95% said their experiences with the writing project would translate into improved writing skills for their students.

ABOUT THE EVALUATIONS

The Academy for Educational Development—
National Writing Project Evaluation

AED’s three-year evaluation of the National Writing Project began in 1999. AED collected data from the classrooms of 35 third and fourth grade writing project teachers in five states: California, Kentucky, Mississippi, Oklahoma, and Pennsylvania. A total of 763 pieces of student work were analyzed. In three-fourths of the schools studied, more than 50% of students were eligible for free or reduced-price lunch.

The AED study included two components. To assess teacher practices, assignments, and corresponding student work, participating teachers submitted two assignments that they felt prompted students to learn a subject or skill at their highest level. Teachers also submitted final drafts of all student work produced in response to those assignments.

AED scored teacher assignments on the extent to which they asked students to construct knowledge, demonstrate understanding of concepts, and connect the topic to their own lives. Corresponding student work was scored for organization and coherence, construction of knowledge, and usage, mechanics, and spelling. AED also administered a questionnaire about teacher assignments and classroom practices, and conducted telephone interviews with all participating teachers.

Inverness Research Associates—
The National Writing Project: Client Satisfaction and Program Impact

IRA distributed a participant satisfaction survey to all teachers in writing project invitational institutes in summer 2000. A total of 2,731 teachers representing 154 sites completed the survey. Twenty-two percent responded to a May 2001 online follow-up survey designed to further evaluate the impact of writing project programming.

For more information on methodology and results, please see Mark St. John, Kathleen Dickey, Judy Hirabayashi, and Laura Stokes’s The National Writing Project: Client Satisfaction and Program Impact (Inverness, California: Inverness Research Associates, 2001).
