

Don't forget UNITS! Please leave answers with π ; do not replace with approximation.

- (8) 1. Convert each of the following units, showing your work.

a. $2.05 \text{ m}^3 = \underline{\hspace{2cm}} \text{ cm}^3$

$$2.05 \text{ m}^3 = 2.05 \text{ m}^3 \cdot \frac{100 \text{ cm}}{1 \text{ m}} \cdot \frac{100 \text{ cm}}{1 \text{ m}} \cdot \frac{100 \text{ cm}}{1 \text{ m}} = 2.05 \cdot 100 \cdot 100 \cdot 100 \text{ cm}^3 = 2050000 \text{ cm}^3$$

b. $7500 \text{ mL water (at } 4^\circ\text{C)} = \underline{\hspace{2cm}} \text{ kg.}$

$$7500 \text{ mL} = 7500 \text{ mL} \cdot \frac{1 \text{ g}^*}{1 \text{ mL}} \cdot \frac{1 \text{ kg}}{1000 \text{ g}} = \frac{7500}{1000} \text{ kg} = 7.5 \text{ kg}$$

* (this equivalence good only for substances which have the same density as water at 4°C)

$$\text{or say } 7500 \text{ mL} = 7500 \text{ cm}^3 = 7500 \text{ g} = 7.5 \text{ kg}$$

- (8) 2. Place the following measures in increasing order: 2.5 ft 14 in 1.5 m 2 dm

$$\underline{2 \text{ dm}} < \underline{14 \text{ in}} < \underline{2.5 \text{ ft}} < \underline{1.5 \text{ m}}$$

Smallest Largest

$$2.5 \text{ ft} < 3 \text{ ft} = 1 \text{ yd} < 1 \text{ m} < 1.5 \text{ m}$$

$$14 \text{ in is close to } 12 \text{ in} = 1 \text{ ft} < 2.5 \text{ ft}$$

$$2 \text{ dm} = .2 \text{ m} < .3 \text{ m} \dots \text{which is close to } 1 \text{ ft, and } 1 \text{ ft} < 14 \text{ in}$$

- (3) 3a. Draw a sketch which illustrates the relationship between square yards and square feet.

Since $1 \text{ yd} = 3 \text{ ft}$, a square yd, being a square that's 1 yd by 1 yd, is a square that is 3 ft by 3 ft, and thus contains NINE ft^2 , as SHOWN.

- (9) 5. Find the SURFACE AREA of this right triangular prism, showing your work.

We know this from the 3-4-5 dimensions of the \triangle

$$\begin{aligned}
 \text{SA} &= \text{Area of triangular ends} + \text{Area of rectangular lateral walls} \\
 &= 2 \cdot \frac{1}{2} \cdot 4\text{m} \cdot 3\text{m} + (3\text{m} + 4\text{m} + 5\text{m}) \cdot 30\text{m} \\
 &= 12 \text{ m}^2 + 12 \text{ m} \cdot 30 \text{ m} \\
 &= 12 \text{ m}^2 + 360 \text{ m}^2 \\
 &= 372 \text{ m}^2
 \end{aligned}$$

- (8) 6. Find the AREA of the demilune* window pictured at right, showing your work.
 *(the window is rectangular with a semicircular part at the top)

$$\begin{aligned}
 \text{AREA} &= \text{Area of the rectangular region} + \text{Area of the semicircular top} \\
 &= 8 \text{ ft} \cdot 10 \text{ ft} + \left(\frac{1}{2}\right) \pi (4 \text{ ft})^2 \\
 &= 80 \text{ ft}^2 + 8 \pi \text{ ft}^2 \\
 &= (80 + 8 \pi) \text{ ft}^2
 \end{aligned}$$

- (4) 7. If the area in a circle is 600 square meters, then what area does a 60° sector of that circle contain?

A 60° sector contains $\frac{1}{6}$ of the circle (since $60^\circ/360^\circ = \frac{1}{6}$).

$$\frac{1}{6} \text{ of } 600 \text{ m}^2 = 100 \text{ m}^2$$

- (5) 9. Write a formula which gives the VOLUME of a right circular cylinder with base radius r and height h .

$$\text{Volume of any cylinder} = (\text{area of base}) \cdot \text{height} = \pi r^2 \cdot h$$

What happens to the volume of a cylinder if the base radius is doubled and the height is cut in half?
 [circle the LETTER of your selection] The new volume is().

- A the same. B 1.5 times as great. **C 2 times as great.** D 2.5 times as great.
 E 4 times as great. F 8 times as great. G actually smaller. E insufficient information

If dimensions change from r & h to $2r$ and $h/2$ then volume changes from $\pi r^2 h$ to $\pi (2r)^2 (h/2)$, which is $2 \pi r^2 h$ (twice the original volume).

- (4) 11. Find the distance between the points $(-2, 5)$ and $(6, -1)$.

Using the theorem named for Pythagorus:

$$\begin{aligned}
 6^2 + 8^2 &= D^2 \\
 D &= 10
 \end{aligned}$$

The distance is 10 units

- (4) 12. Find the HEIGHT of an equilateral triangle whose sides are 4 cm long.

Using that Pythagorean theorem again:

$$\begin{aligned}
 h^2 + (2 \text{ cm})^2 &= (4 \text{ cm})^2 \\
 h^2 + 4 \text{ cm}^2 &= 16 \text{ cm}^2 \\
 h^2 &= 12 \text{ cm}^2 \\
 h &= \sqrt{12} \text{ cm} \text{ or } 2\sqrt{3} \text{ cm}
 \end{aligned}$$
