Dear representatives of the Italian government;

I am writing to you to recommend that you deny authorization to the the drilling permits d505 BR-EL and d493 BR-EL, as filed to your office by Petroceltic International, based in Dublin.

These permits would allow an Irish company to drill heavy sour oil about 25 km from shore in one of the most beautiful seas of the Adriatic along the Costa dei Trabocchi, and would be the beginning of the transformation of Abruzzo into an oil district.

The company itself acknowledges in its environmental statement that the oil rig will be clearly visible from shore, that polluting chemicals will be used, that large quantities of waste waters will have to be transported and treated onshore, that fishing activities will be affected. Most likely industrial facilities will have to be built on land, turning a touristic place into an oil processing location. The Abruzzo people stand to gain very little in return, since the oil will be sold on the open market and since Italian royalties are among the lowest in the world - about 4% of all profits, which will mostly end up in Roman coffers.

We have all seen the devastation caused by the massive BP oil spill and we believe that the Ministry should follow the directive of the European commissioner for energy, Gunther Oettinger, who on July 7th 2010, proposed a moratorium on deepwater drilling throughout Europe. Furthermore, Italy ratified the Aarhus treaty, which guarantees public participation and calls for the will of the people to be heard in all environmental matters.

Having lived in Louisiana, USA while serving as a faculty member in the department of mathematics at Louisiana State University in Baton Rouge, I am keenly aware of the dangers of off shore drilling and the need for energy production from renewable resources.

Sincerely

David Klein
