

To use Any Video Converter

1. Start -> All Programs -> AnvSoft -> Any Video Converter
2. Add Video Files -> Browse for your video and select the desired video (generally the largest size file) -> Open
3. Check the video in the preview window to the right of the software window
4. If trimming is needed, click on the scissor icon in the preview window.
 - Another window will automatically open and the video will begin to play.
 - click on the left bracket icon 
 - two small blue icons will appear under the duration bar of the video
 - move the left icon to the desired start point and the right icon to the desired end point
 - "Apply" -> "OK"
5. Check the "Output Profile" above the preview window
 - Make sure that it is set to Apple iPhone MPEG-4 Movie (*.mp4)
6. "Convert Now"
 - after conversion is finished, a window will pop up, click on "Open Output Folder"
 - Check the size and Rename the trimmed video
