

ONLINE TECHNIQUE VIDEOS

Two sets of online technique videos are available for this course. URL links to these online videos are in the Schedule of Experiments handout for the course.

A set of laboratory technique videos has been prepared by a consortium of universities (including CSU Northridge) led by UCLA. These videos describe background information and general procedures for various experimental techniques.

A second set of technique videos has been prepared by the Department of Chemistry and Biochemistry, CSU Northridge that show in detail how to run the specific experiments in Chemistry 333L. Many Chemistry 333L students have found that watching these videos in advance has helped them to perform the experiments skillfully and efficiently during the laboratory sessions.
