---

---

---

---

---

## Agenda

- Review
  - Relationships
- Inheritance

2

---

---

---

---

---

---

---

---

## Review

- Association
- Aggregation
- Composition
- 7-3-Lab

3

---

---

---

---

---

---

---

---

## Inheritance

- Inheritance is the process of deriving a new class from an exiting one.
- One purpose of inheritance is to reuse existing software
- Inheritance is the is-a relationship.

4

---

---

---

---

---

---

---

---

## Inheritance (cont'd)

- The original class that is used to derive a new one is called *parent class*, *super class*, or *base class*.
- The *derived class* is called a *child class*, or sub class.

5

---

---

---

---

---

---

---

---

## Inheritance - Java

- Three reserved words
  - extends
  - protected
  - super

6

---

---

---

---

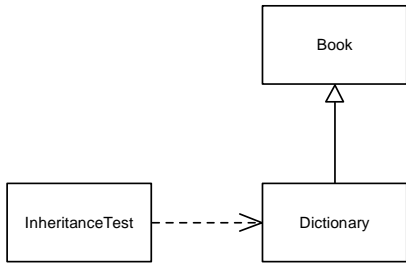

---

---

---

---

### Inheritance - UML

7

---

---

---

---

---

---

---

---

### Inheritance - Java Code

```
Public class InheritanceTest {  
    public static void main (String [] args)  
  
        Dictionary webster = new Dictionary();  
        .....  
}  
  
public class Book {  
    .....  
}  
  
public class Dictionary extends Book {  
    .....  
}
```

8

---

---

---

---

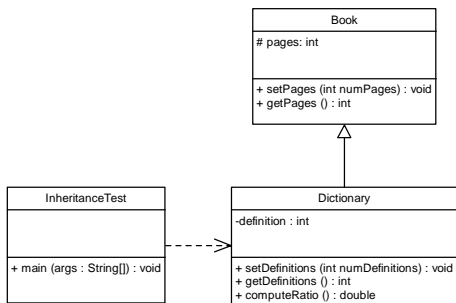

---

---

---

---

### Inheritance - UML

9

---

---

---

---

---

---

---

---

```
public class Book {
    protected int pages = 1500;

    public void setPages (int numPages) {
        pages = numPages;
    }

    public int getPages () {
        return pages;
    }
}
```

10

---

---

---

---

---

---

---

---

```
public class Dictionary extends Book {
    private int definitions = 52500;

    public void setDefinitions (int numDefinitions){
        definitions = numDefinitions;
    }

    public int getDefinitions(){
        return definitions;
    }

    public double computeRatio(){
        return definitions/pages;
    }
}
```

11

---

---

---

---

---

---

---

---

```
public class InheritanceTest {
    public static void main (String[] args){
        Dictionary webster = new Dictionary ();

        System.out.println ("Number of pages: " +
            webster.getPages());
        System.out.println ("Number of definitions: " +
            webster.getDefinitions());
        System.out.println ("Definitions per page: " +
            webster.computeRatio());
    }
}
```

12

---

---

---

---

---

---

---

---

## The protected Visibility Modifier

- Protected visibility provides the best possible encapsulation that permits inheritance

13

---

---

---

---

---

---

---

---

## The super Reference

- All methods and variables, even those declared with private visibility, are inherited by the child class. Constructors, however, are NOT inherited.
- The reserved word `super` can be used in a class to refer to its parent class. Using the super reference, we can access a parent's members.

14

---

---

---

---

---

---

---

---

```

public class Book2 {
    protected int pages;

    public Book2 (int numPages) {
        pages = numPages;
    }

    public void setPages (int numPages) {
        pages = numPages;
    }

    public int getPages () {
        return pages;
    }
}

```

15

---

---

---

---

---

---

---

---

```

public class Dictionary2 extends Book2 {
    private int definitions;

    public Dictionary2 (int numPages, int numDefinitions) {
        super (numPages);
        definitions = numDefinitions;
    }

    public void setDefinitions (int numDefinitions){
        definitions = numDefinitions;
    }

    public int getDefinitions(){
        return definitions;
    }

    public double computeRatio(){
        return definitions/pages;
    }
}

```

16

---

---

---

---

---

---

---

---

```

public class InheritanceTest2 {
    public static void main (String[] args){
        Dictionary2 webster = new Dictionary2 (1500, 52500);

        System.out.println ("Number of pages: " +
            webster.getPages());
        System.out.println ("Number of definitions: " +
            webster.getDefinitions());
        System.out.println ("Definitions per page: " +
            webster.computeRatio());
    }
}

```

17
