

Introducing the

Gale Calculus Consortium Reform Movement

*The Harvard Calculus Reform Movement only went half-way. Harvard eliminated half of calculus from the calculus sequence. The revolutionary new **Gale** Calculus Reform Movement completes the job by purging the dreaded subject altogether.*

Students are asked to reconstruct calculus entirely on their own, or do whatever they like.

*Content stifles creativity. The **Gale** Calculus Reform Consortium Movement encourages students to reinvent calculus from scratch in the classroom context. Group projects, hand held calculators, and computers are encouraged. Through "hands on" co-operative learning, students are also asked to find applications to the "real world" (whose existence in education circles has recently been rumored).*
