

Research Question

In 2018, Fabulous Fruit expanded its operations in Georgia to include growing peaches for commercial canning companies. Land was prepared, irrigation systems installed and 3,000 “whips” (baby trees) were planted. It is expected that the trees will be ready for commercial production by 2021. At that time, Fabulous will begin selling the entire crop for canning. The trees will not produce a large enough crop for commercial canning before 2021. In 2019 and 2020, small quantities of fruit will be harvested and sold at local farmers’ markets. Fabulous wants to know how to properly account for those sales.

Required: Submit only one paragraph containing your recommendation (no cover sheet, no reference sheet, and no excerpts). Include in-text citations.
