

Neuro-Rehabilitation Clinic For Adults

The NeuroRehabilitation Clinic provides year-round individual and group therapy to individuals with a variety of speech, language, and cognitive-communicative disorders such as :

- Aphasia (loss of language, either Receptive, Expressive, or both)
- Apraxia of Speech (inability to initiate or sequence speech)
- Dysarthria (weakened speech and eating musculature)
- Dysphagia (Swallowing disorders)
- CVA (Cerebro-vascular Accident, or Stroke): either Right or Left Hemisphere or Global Stroke
- Brain Injury, and its effect on communication and thinking skills
- Loss of cognition or thinking skills, including awareness of deficits, safety awareness, thought organization, memory, and sequencing.

Who can benefit from such therapy?

Anyone who has had a stroke or other brain injury, or perhaps has an ongoing medical condition such as Parkinson's Disease.

NeuroRehabilitation Clinic for Adults After Stroke or Brain Injury

The NeuroRehabilitation Clinic is unique in that it takes advantage of the latest ongoing University research to help patients with their communication and cognitive skills.

Patients receive an initial comprehensive evaluation, then a therapy plan is developed.

In Individual Therapy, new concepts are introduced. Therapy consists of in-session work, and a home program to move the patient toward mastery.

Group Therapy has three objectives:

- Patients practice what they are learning in individual therapy in a supportive environment.
- Patients have a chance to use good pragmatic skills and socialize with others who also understand their difficulties in communicating.
- Patients and families form bonds and supportive friendships while skill building and taking part in practical activities.
