Energy		Six Degrees Could Change the World	Based on Mark Lynas's Six Degrees: Our Future on a Hotter Planet, this program explores the theory that Earth's average temperature could rise six degrees Celsius by the year 2100. One poignant degree at a time, the consequences of rising temperatures on Greenland's ice sheet and Himalayan glaciers, tropical coral reefs and the Amazon rainforest, and elsewhere across five continents are illustrated. In addition, some of the world's top climate researchers present existing technologies and remedies that can help in the battle to cool off the global thermometer. An alarming preview of a potentially catastrophic future-and a global call to action!	Nature -- Effect of human beings on. Human geography -- Environmental aspects. Human ecology. Environmental geography. Ecosystem management. Climatic changes. Air pollution.	96mins	2007	streaming online
Energy	Waste	Sustainability Considerations in Design	Can sustainability be applied to any design work, whether it's jewelry or architecture? What exactly does it mean to take a sustainable approach to design? This program examines the art of conceiving and creating physical products according to ecologically sound principles. Viewers learn the importance of, and the basic working framework for, design work that utilizes renewable resources, makes the most efficient use of energy and materials, and minimizes waste and environmental impact. Examples from the industries of architecture, fashion design, and graphic design are provided.	Technology -- Moral and ethical aspects. Technology and law. Mechanical engineering. Graphic arts -- Study and teaching. Graphic arts. Environmental protection. Design. Conservation of natural resources -- Economic aspects. Computer graphics. Communication in design. Food		We Feed the World	A globe-trotting exposé of our modern agricultural system. From struggling fishermen and long-distance truckers, to agronomists and multi-national corporate executives. Presents a sobering portrait of the people who define the contemporary food industry, where the constant pursuit of profit takes precedence over the health of the workers, the hungry, and the environment. Reveals the distressing problems of the industrialized world food system and what world hunger has to do with us. Nearly 1 billion of the 7 billion people on Earth are starving, but the food produced could feed 12 billion people.	Agricultural systems. Food crops. Agriculture. Plant biotechnology. Sustainable agriculture.	96mins	2009	In library as a hard copy
Food		The Future of Food: A Looming Crisis	According to Tim Lang, Professor of Food Policy at London's City University, future wars may be fought specifically over agricultural resources. Given the present volatility of food prices and the riots they provoked in 2008, his theory seems to be on the mark. This program assesses the potential for a global food crisis as it guides viewers through issues involving climate change, oil consumption, biofuel development, fish stock depletion, and other topics. A Rift Valley herder discusses drought in Africa; a Cuban scholar details the impact of the Soviet collapse on food transportation in his country; an Indian farmer reports being pressured into planting jatropha instead of food crops; and Senegalese fishermen lament the intrusion of Western corporate interests. Food	Water	Seeds of Change: Case Study of Sustainable Development in China	After surviving an emergency crash-landing, Dr. Sam Chao resolved to do something that would make a difference in the world. This award-winning program follows the outcome of his resolution: ECO, the Ecological Conservancy Outreach fund. Donating his life savings to the project, Dr. Chao enlists his childhood friend, Dr. Larry Wang, to clean up the Yangtze River and its tributaries, ravaged by erosion due to deforestation. As the video shows, sustainable ecological improvement must be linked to economic improvement for farmers whose very lives hang in the balance of such plans. Filmed largely in China's Yunnan province, Seeds of Change visits the farmers who switch from growing crops on the riverbanks to forest-based agriculture.	Water -- Pollution. Food	Water	Chad: Hydraulic Projects and Peace	Characterized as an LDC or Least Developed Country, the nation of Chad wrestles with drought, population growth, and resulting tensions between farmers and herders. This program investigates hydraulic projects and mediation initiatives that are fostering relationships between Chad's food growers and its nomadic, livestock-centered cultures. Overlooking the basic causes of Chadian land disputes and competition for water sources as well as failed modernization schemes proposed during the 1960s, the film explores new solutions based on recognizing traditional agriculture and natural migration routes. Viewers witness "sit-down" talks between farmers and herders that could	Wealth. Social geography. Social ecology. Social classes. Power (Social sciences) Nature -- Effect of human beings on. Urban	Water	Sustainable Communities	What do we mean when we talk about sustainable communities? How can they be created? This program joins architects, urban planners, civic leaders, business owners, and community residents in three separate localities as they respond to the challenge of building a sustainable community. A number of environmental and urban-planning questions are addressed, including: Is the architecture sound, pleasing, and eco-friendly? What transport links does the community have? What health, recreational, and retail services are provided? Will all residents enjoy the same level of safety and security? This is a valuable teaching aid for human geography, environmental studies, and many other subjects.	Water -- Environmental aspects. Urbanization. Social ecology. Social change -- Environmental aspects. Rural-urban migration. Population policy. Nature -- Effect of human beings on. Land use -- Environmental aspects. Human ecology. Community ecology. Biotic communities. Architecture -- Study and teaching.	51mins	2008	streaming online
Waste	Food	Community	"Communities across the U.S. are facing complex challenges in their attempt to balance growth with the preservation of natural resources. How can citizens effect change in their own communities? This program explores a variety of new approaches and grassroots efforts--transforming a toxic waste threat into a revenue generating eco-enterprise; creation of a "living machine," an ingenious system that uses fish, bacteria, and plants to clean waste water; and, experiments in sustainable technology where one industry's waste becomes another's resources"--Container	Human ecology. Conservation of natural resources - United States -- Citizen participation. Nuclear power plants -- Environmental aspects. Wetlands -- Environmental aspects. Hazardous wastes -- Environmental aspects. Sewage -- Purification -- Technological innovations. Sewage disposal plants - Technological innovations.	56mins	1997	In library as a hard copy

Waste		Indoor Air Quality	According to some environmental experts, the air inside our homes and offices could be more polluted than the outdoor air in the largest cities. Radon, mold, household cleaning products, and secondhand smoke are only a few elements that may pose health risks. This program examines the issue in detail and illustrates ways to improve indoor air quality. Case studies include a nonsmoker diagnosed with Stage 4 lung cancer whose basement was found to contain high levels of radon, and a woman whose exposure to household mold almost ended her life. In addition to commentary from Dallas Jones, Chairman of the American Radon Policy Coalition, the program also features two indoor air quality experts, Mark McGowan and Jeffrey	Water -- Pollution. Water		Rain Forest	The tropical rain forests of the world are home to nearly half the animal species on earth and contain some of the most fascinating examples of natural adaptation ever seen. This classic program takes viewers into the rain forests of Costa Rica to witness a richly varied habitat under threat from human encroachment. Here, a basilisk lizard walks on water, howler monkeys bask in the sun, and leaf-cutting ants carry sections of foliage many times their weight into underground fungus gardens. Still provocative after a quarter century, the film sounds an eloquent warning about the natural wonders we stand to lose if industry and agriculture continue to take precedence over rain forest protection.
